Probably a lot of research time

will take a lot of time
very tedious

Steam servers

custom json/
xml/... for specific skin scores

bitskins/StM

inv. json

CSS

web page will take very
little time

score += K • price

Parse
into list

ID input ← include instructions
on page on how to find
this

score += special
for skin

HTML

iterate
through

score

four best skins
1.
2.
3.
4.

share

code for adding
social media skin
button

create 2nd
list of scores

display skins
with best score

make list of skins
scores in order

sort by
greatest

easy, just need to research
it

Most logic heavy part of project but will probably be pretty easy
